

## Agenda

- Any feedback on query state model
- Brief explanation on timeline of project
- Progress:
  - Currently scoped out concept design
  - Created presentation for class
  - Created high fidelity Figma of basic posting

## Meeting Notes

- Questions we have:
  - Query concept
  - It is fine according to mentor
- Questions Jerry has
  - Concern: Scope of project -> seems on planning on using map based app and with that entails map APIs, those are pretty tricky to deal with if haven't played around with before BE WARY and start early -> workload seems a bit much?
    - We will use open street map and potentially google maps
  - Conceptually things seem pretty well
  - Other ideas: making bike ideas more fun, estimated time for bike path
  - For concept sketches: just need model and diagram
  - For wireframe: would be looking for medium-high fidelity with transitions (Figma or powerpoint)
  - If something pops up want to include not happened in design proposal -> answer is yes
  - Proof of Concept - Have it be able to update route or load for user, doesn't have to look pretty
  - MVP - want all features to be present doesn't have to look nice or operate smoothly
  - Final Project - want it to be nice and good looking
