

For our project plan, we decided to split into 5 main tasks for each of our sprints, which is Proof of Concept, First Rollover (tasks that haven't been implemented in time), MVP, Second Rollover, and the Final submission. We have also decided to have each task with a description and deliverable and assignee. For each week and milestone, we have assigned deadlines for these tasks to be finished by. If they are not accomplished in that sprint, they will be rolled over in that sprint.

This is the link to our project plan task, broken into around 10-20 tasks.

When things don't go according to plan, we will shift our timelines accordingly and plan to drop our reach goals. Some of the reach goals mentioned in the sheet above include notifications and dropping images. These are not necessary for the core product but would be "nice-to-have" features.
